

My Diet Type

Preferred Intermittent Fasting Model:

Step #1: 12:12 (5x a day)

Step #2: Drop 1 Meal = 14:10

Step #3: Drop 2 Meals = 16:8

Step #4: Add 24 hr. Fast 1x a month

MIXED TYPE

P 30%

C 40%

F 30%

Preferred Fitness Macros:

40% Strength (18 min. / 60 min.)

40% Endurance (36 min / 60 min.)

20% Flexibility (12 min. / 60 min.)

Food Responses: A Mixed Type requires an equal balance of proteins, carbohydrates, and healthy fats, and including variety in the everyday meal plan is essential. Of the three metabolism types, this one is actually easiest to manage, because the food choices are greater. Some meals may resemble those for Protein Types, and some may resemble those for Carb Types; some may have features of both.

Weight Loss: The appetite of a Mixed Type tends to vary greatly throughout the day—hungry at meals but not in between; ravenous at times and no appetite at others. Of course, these responses depend on what foods have been eaten that day. Mixed Types generally don't suffer from cravings. However, like the other types, Mixed Types who eat too much sugar or carbohydrates may develop strong sugar cravings and weight gain results.

Energy: Mixed Types must incorporate high-fat and low-fat proteins as well as high-starch and low-starch carbohydrates into their meal plans to feel energetic throughout the day. If you are a Mixed Type, familiarize yourself with the requirements of both types to find your perfect balance. A Mixed Type may be more of a Protein Mixed Type or a Carb Mixed Type—in other words, have more qualities of one type than the other.

What Does a Mixed Type Need? The only way to truly figure this out is by trial and error: by paying close attention to responses to each meal and then determining which foods make you feel good and energized and which foods leave you feeling hungry, fatigued, cranky, or craving more. Finding the right balance of proteins, carbohydrates, and fats is the key to losing weight, feeling great, and achieving optimal health.

"Must Do's" for Mixed Types: Try starting your meal with a high quality protein and fat together with your vegetable or complex carb to follow. For example, aim for equal portions of protein (meat) and vegetables with a quarter of your meal from fat. Don't snack on fruit. Use fruit as a dessert. Always include a protein source for your breakfast. A heavy carbohydrate breakfast is not a good way to start the day for mixed types. Beware of gluten. Mixed types have a higher tendency to not metabolize gluten well.
